# Penetration Tests

The GlobaLeaks Project is periodically subject to independent security audit and penetration tests in order to verify and improve the security of the system.

Thanks to our funders and users GlobaLeaks received already 6 independent penetration tests here available. Many others, during the years, have been performed by some private adopters.

We additionally invite independent security researchers to apply to our [Bug Hunting](#) initiative, which it's currently hosted on [HackerOne](#).

These are the detailed reports of penetration tests we've received, along with the transparent feedback and fixing done in response:

Date	Auditor	Goal	Report
2013 Q1	<a href="#">iSecPartners</a>	Architecture Audit	<a href="#">report</a>
2013 Q2	<a href="#">Cure53</a>	Web Security Audit	<a href="#">report</a>
2013 Q4	<a href="#">VeraCode</a>	Overall Audit	<a href="#">report</a>
2014	<a href="#">LeastAuthority</a>	Source Code Audit	<a href="#">report</a>
2018	<a href="#">SubGraph</a>	Overall Audit	<a href="#">report</a>
2019	<a href="#">RadicallyOpenSecurity</a>	Crypto Audit Multi-tenancy Audit Overall Audit	<a href="#">report</a>

If you want to carry out or sponsor an Independent Security Audit, please email projects at [info@globaleaks.org](mailto:info@globaleaks.org)
